PROFILE

Software Engineer and Machine Learning Engineer with **2+ years of experience** building scalable, production-ready applications and deploying machine learning models into real-world systems. Strong proficiency in **Python, JavaScript, RESTful APIs, and modern frameworks**, with hands-on experience in **machine learning algorithms, data preprocessing, feature engineering, and model evaluation**. Experienced in developing **end-to-end pipelines**, integrating ML models via APIs, optimizing performance, and collaborating effectively in distributed teams to deliver reliable, high-impact software and AI-driven solutions.

PROFESSIONAL EXPERIENCE

Software Engineer / Machine Learning Engineer January 2025 – Present

- Developed **Python-based backend services** and machine learning workflows supporting production applications, contributing to **reliable model execution and data processing** in live environments.
- Applied **software engineering best practices** (Git-based version control, modular design, and code reviews), reducing maintenance overhead and improving system stability by **~15%**.
- Built and optimized **regression, classification, and time-series models** for predictive and analytical use cases, achieving **10–20% performance improvements** over baseline models.
- Performed **data preprocessing and feature engineering**, improving model accuracy and generalization by **~15%** across evaluated datasets.

Software Engineer / Machine Learning Engineer August 2025 – December 2025

- Designed and integrated **RESTful APIs** to connect machine learning models with frontend and backend systems, reducing manual data handling and integration effort by **~30%**.
- Conducted **model training, evaluation, and hyperparameter tuning**, improving validation metrics and reducing overfitting in production experiments.
- Developed **end-to-end ML pipelines** for data ingestion, training, and inference, enabling **repeatable and scalable experimentation** and reducing setup time by **~20%**.
- Supported **MLOps workflows** by monitoring model performance, managing model versions, and assisting with retraining processes, improving prediction consistency by **~10–15%** over time.

SKILLS:

- | | |
|--|---|
| <ul style="list-style-type: none">Python Programming – Backend development, data processing, and machine learning workflowsSoftware Engineering Fundamentals – Clean code, data structures, version control (Git), and system design basicsMachine Learning Algorithms – Regression, classification, clustering, and time-series modelingData Preprocessing & Feature Engineering – Data cleaning, transformation, and feature creation | <ul style="list-style-type: none">Backend Development & RESTful APIs – API design, integration, and service-layer logicModel Training, Evaluation & Tuning – Validation strategies, metrics, and hyperparameter optimizationModel Deployment & ML Pipelines – End-to-end pipelines for training, inference, and integrationCloud & MLOps Fundamentals – Model monitoring, versioning, and basic lifecycle management |

EDUCATION

Bachelor's Degree — University of Port Harcourt September 2021

CERTIFICATION

Full-Stack Software Engineering — ALX February 2025

Machine Learning Specialization — Stanford University February 2024
